OUTLINE

- Executive Summary
- Introduction
- Methodology
- Results
 - Visualization – Charts
 - Dashboard
- Discussion
 - Findings & Implications
- Conclusion
- Appendix

EXECUTIVE SUMMARY

- The present work analyse the survey from Stack Overflow with the goal of identify the most demanded technologies and trends in the community who code.
- Bringing the information together with dashboard showing current technologies, future trends and demographics.
- In the end, can observe than PostgreSQL and Javascript are the tool most demanded and desired BD and language. For other side the demographics are concentrated (68.6%) in a range of 25 to 44 years old.
- Professions related to these tools are highly profitable since among the most popular languages the average annual salary is between 84,700 and 113,000 dollars.

INTRODUCTION

- Stack Overflow's annual Developer Survey is the largest and most comprehensive survey of people who code around the world.
- Results don't represent everyone in the developer community evenly.
- Trends to predict where the developers are doing.

METHODOLOGY

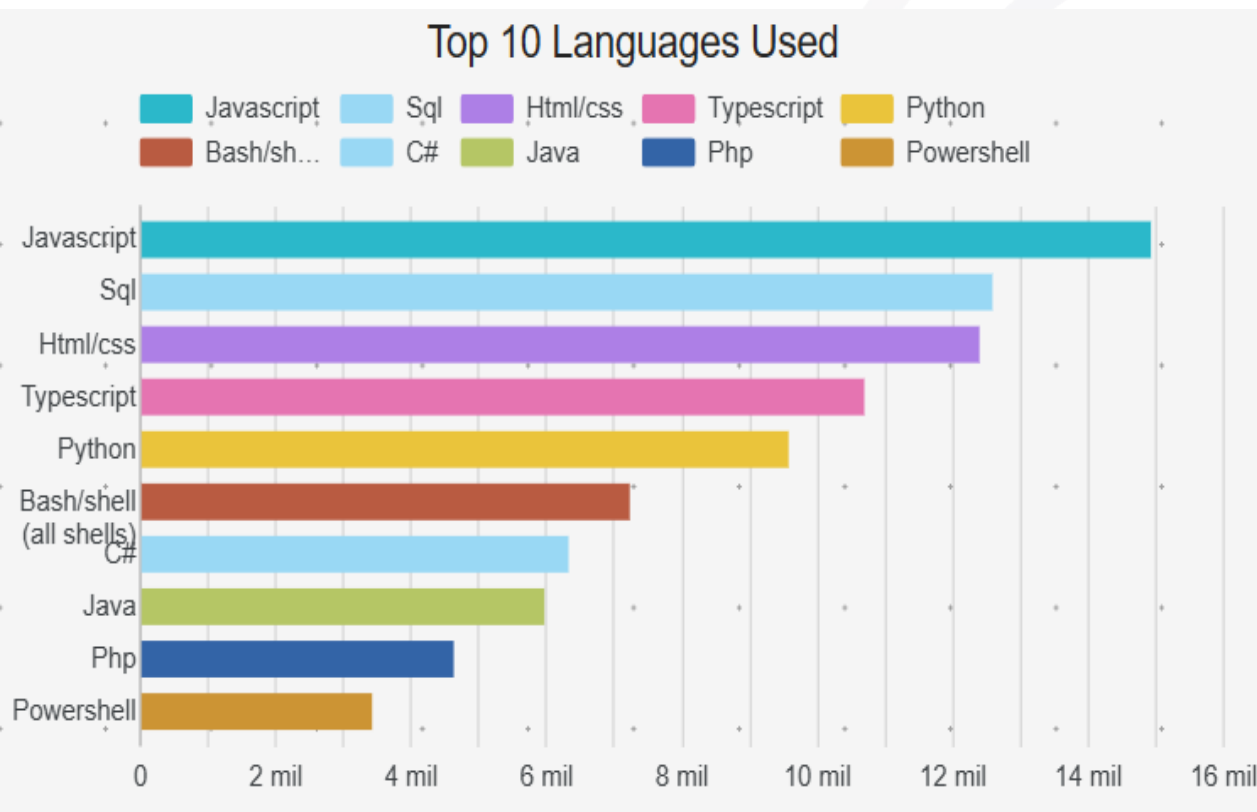

- Collect survey data and explore its content
- Data Wrangling
- Exploratory data analysis
- Data visualization
 - Relationships, composition and comparison of data
 - Dashboards

PROGRAMMING LANGUAGE TRENDS

Current Year

Next Year

PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

Findings

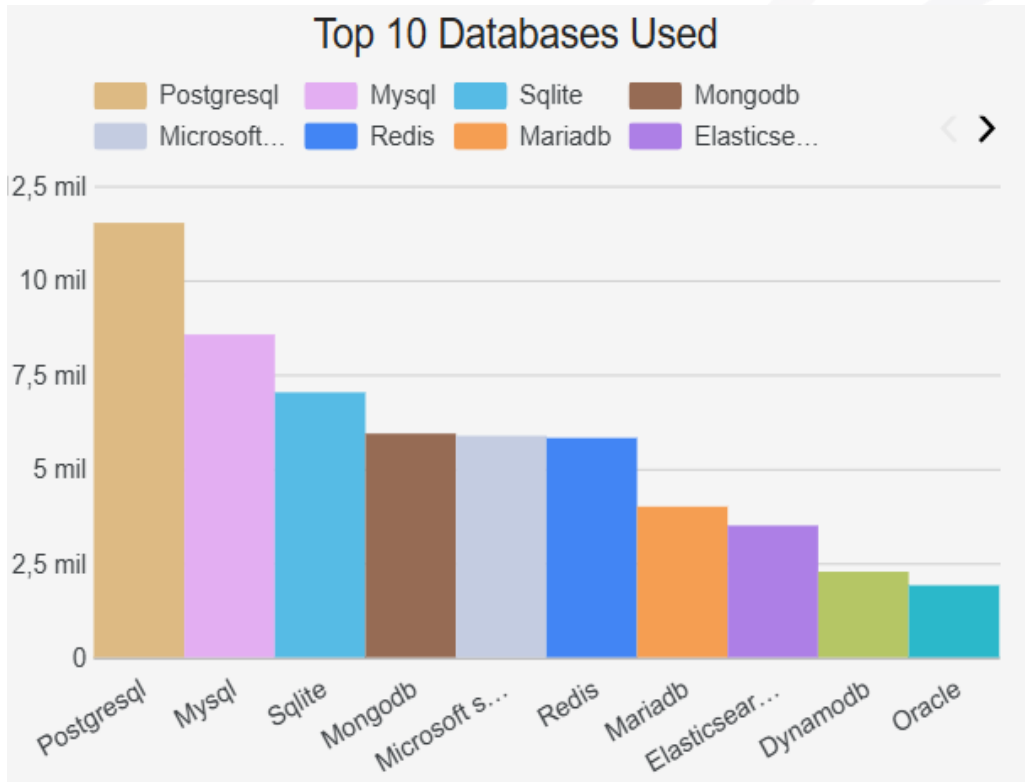

- Javascript and SQL are currently the most used languages as well as the most desired to work with.
- Likewise, the difference in current use vs desired between Javascript (1) and SQL (2) is significant.
- The most used languages today are not exactly the same as the most desired ones.

Implications

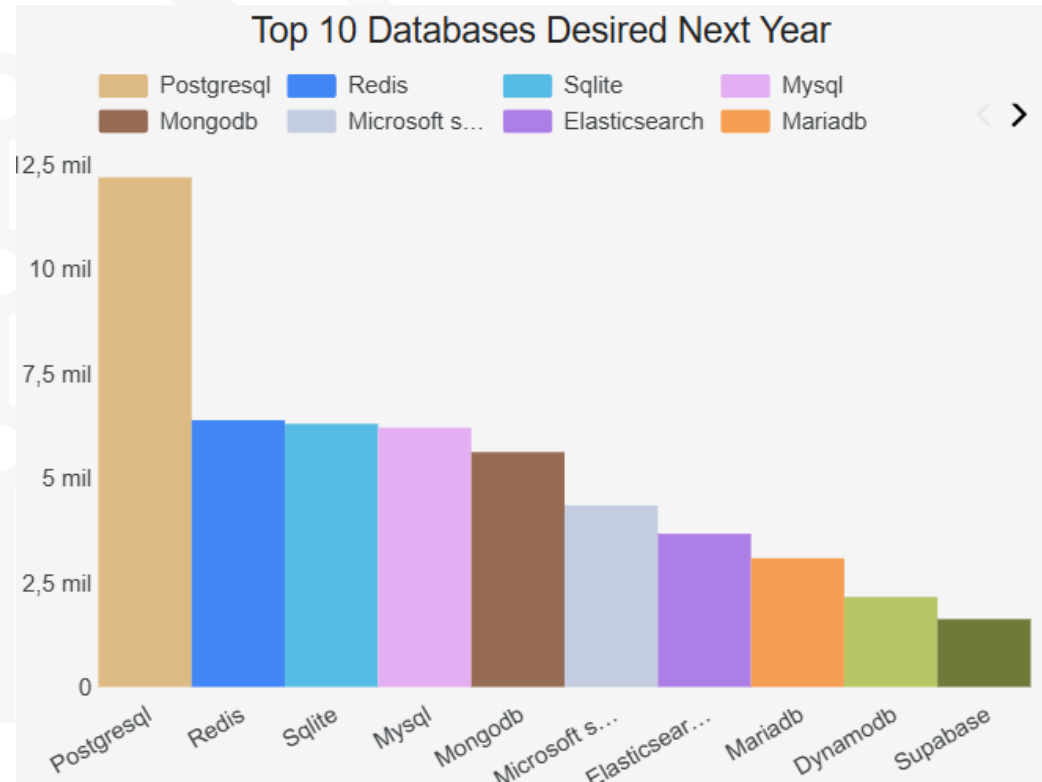

- Interest in using Javascript and SQL remains.
- It may be that those who already use one or both languages are interested in some other language other than Javascript and SQL, but this interest will not necessarily be lost.
- It may be that those who already use one or more languages are interested in a different or new language.

DATABASE TRENDS

Current Year

Next Year

DATABASE TRENDS - FINDINGS & IMPLICATIONS

Findings

- PostgreSQL remains the most popular database in terms of both current use and desire to work with.
- Currently, the top three databases are very well defined. However, as for the trend for next year, the interest from 2nd to 4th place is practically the same.
- The top most used data usage is practically the same currently vs. the trend for next year

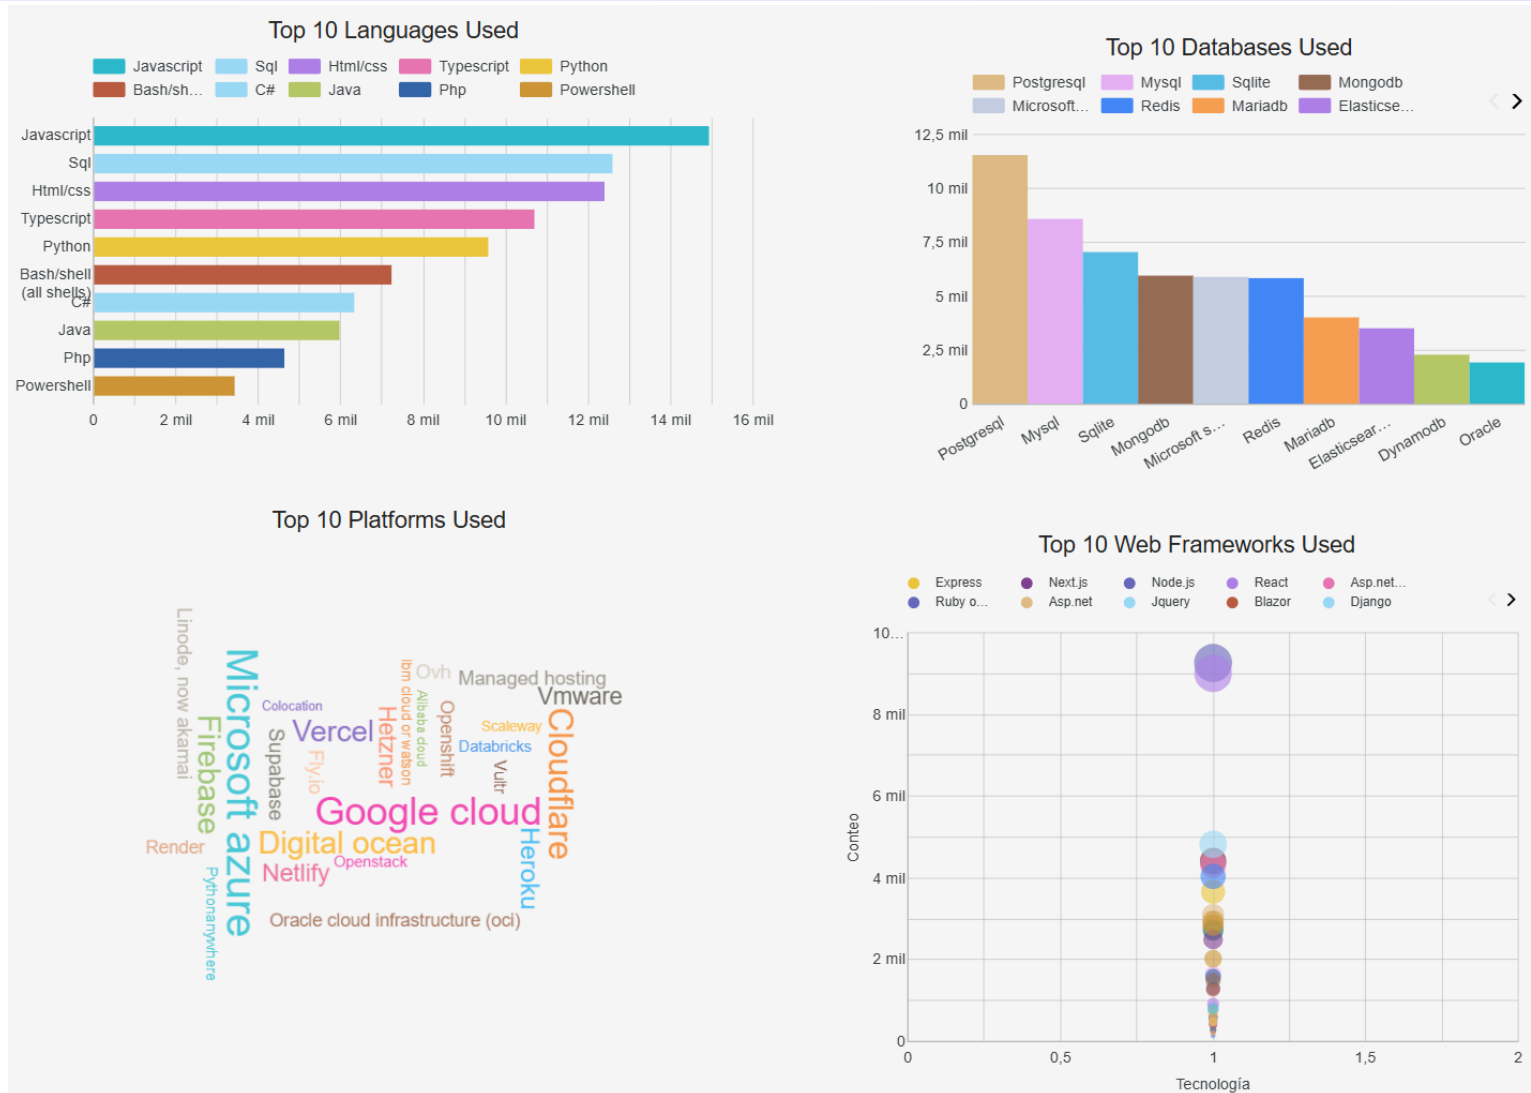

Implications

- There is a significant tendency towards the use of PostgreSQL.
- There is diversity in the trend regarding which databases to use next year.
- This may imply consistency in the use of database technologies.

Respondent Distribution by Education Level

Respondent Count by Age, Classified by Education Level

DISCUSSION

OVERALL FINDINGS & IMPLICATIONS

Findings

- Most of the respondents are between the ages of 25 and 34 (41.3%), and have a university degree (45.7%).
- The usage trend in languages changes significantly, while in databases usage remains practically the same.
- The countries with the largest number of representatives in the survey are the USA, India and Germany.

Implications

- Almost 50% of people who code have a university degree and are between 25 and 34 years old.
- There is dynamism between the use of programming languages, but not in the use of databases.
- There is a higher concentration of people who code in these countries compared to the rest of the world.

CONCLUSION

- Javascript and PostgreSQL are positioned as the programming and database languages
- The most desired web platform to work on is Amazon Web Service (AWS)
- As for web framework, React remains the most interesting option.
- There is dynamism between the use of programming languages, but not in the use of databases.
- This is just an idea of how the developer community is doing, as it does not represent the entire community.
